

PROCESS FLOW DIAGRAM

Points to be remembered

BALASUBRAMANIAN S.

Department of Chemical Engineering

SRM University

PFD - Process Flow Diagram

General points to be remembered in understanding organic chemicals production processes

1. List the raw material required for the production
2. Identify and write down the various methods of production
3. Develop a block diagram from raw material to product
4. Draw the Process Flow Diagram (PFD) from the block diagram using equipment symbols
5. Identify and list the upstream process and down stream processes
6. List the unit operations and unit processes
7. Describe the manufacturing process in tabular column format as discussed in the classroom lecture
8. Write down the applications of the product.
9. Identify and name any two industries who manufactures the products and also mention their locations in India

PFD - Process Flow Diagram
